DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David A. Bilodeau (Reg. No. 43,325) on July 21, 2008.

The application has been amended as follows:

IN THE DRAWINGS:

The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

In Fig. 6, one of the reference numerals has been changed from "164" to -- 162 --

.

In Fig. 7, one of the reference numerals has been changed from "164" to -- 162 --

.

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

IN THE CLAIMS:

In claim 10, line 6 after "rollers", -- arranged directly below some of the conveying rollers and -- has been added.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

Independent claim 2 of applicant's 4/21/2008 Amendment is patentable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including first spacer rollers mounted on a rotation shaft to which conveying rollers are fixed, and second spacer rollers corresponding to the first spacer rollers mounted on a shaft to which first and second separating rollers are fixed, as claimed.

Independent claim 10 of applicant's 4/21/2008 Amendment, as modified by the attached examiner's amendment, is patentable over the prior art of record because the teachings of the references taken as a whole do not show or render obvious the combination set forth, including a plurality of conveying rollers, first separating rollers and second separating rollers arranged directly below some of the conveying rollers and arranged to face outer surfaces of the conveying rollers with gaps between the second separating rollers and the conveying rollers, and which form and maintain a gap with the facing outer surfaces of the conveying rollers greater than a thickness of a media for generating a frictional force to the media regardless of a stiffness of the media; wherein both the first and second separating rollers are mounted on a same shaft, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
